

took an active part in

IABMAS2010

the Fifth International Conference on Bridge Maintenance, Safety and Management.

Helmut Wenzel was the organizer of the MS 15 where he presented the paper “European approach on integrated risk management” and the works of Monika Widmann and Robert Veit-Egerer “Requirements for the fatigue assessment of large steel bridges” and “Evaluation of input-energy dependence on the key performance parameters extracted from ambient vibration measurements with regard to structural assessment”.

Peter Furtner talked about his paper “Practical implementation of SHM with a special focus on the end user’s needs” and the one of Martin Fritz “Web based monitoring and assessment of bridges and structures”.

Within the MS 9 Helmut Wenzel introduced a part of the work at VCE in

“Determination of a performance baseline for lifecycle consideration of bridges”.

Between the sessions the latest projects on structural health assessment with a focus on the latest achievements within the European project IRIS was presented at the booth.
