

## New Measurement & Instrumentation Office

VCE is proud to present the new office of the Measurement & Instrumentation Department. The 4.5m high office consists of 8 work stations with PCs and 2 work stations for soldering and assembling measuring equipment.

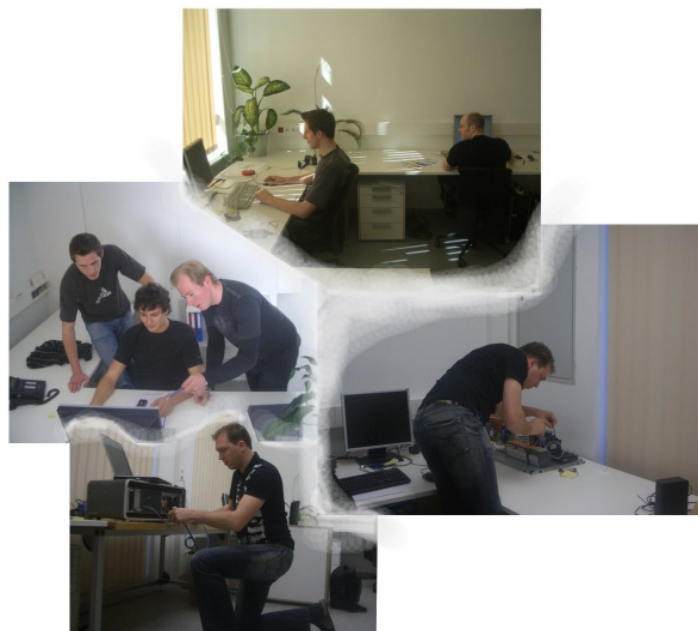

One fourth of the 4.5m high office is roofed over by a gallery. This satisfies the relatively high storage demands and fits in very well. In the middle of the left part of the office some space is reserved for arranging bigger test setups or holding smaller meetings.

The storage shelf at the entrance contains several sensors and heavier measurement equipment.

In order to keep the motivation high and the workflow going, a small kitchen was installed, providing the Measurement & Instrumentation Team with coffee during the early and late hours as well as cool drinks on hot days.

Apart from conducting different measurements, the Measurement & Instrumentation Team of VCE is developing some of its own measurement equipment (BRIMOS® wireless) as well as permanent monitoring systems differing in size – e.g. PAVM for bridges (Permanent Ambient Vibration Monitoring).

We are looking forward to solving upcoming problems in terms of measurement, instrumentation and development in our new office.
