

VCE's Fleet Enriched by a New Car

Since October 2007 VCE has owned a new car. An increasing number of employees as well as numerous projects in and around Austria led to the decision to buy a new car.

The model Ford Focus Traveller meets VCE's requirements for an additional car best. Behind the driver and the co-driver seats there is enough space for measuring equipment up to a maximum weight of around 500 kg. The 1316 kg of empty weight plus the payload is pushed forward by an engine power of 80 KW - enough to reach a theoretical top speed of 188 km/h.

In order to identify the car with VCE, a company logo as well as logos of the systems VCE developed (BRIMOS®, SEISMID®) were attached to the car.

We are looking forward to travelling to clients, measuring sites as well as advanced training courses with the new Ford Focus.
